

Face Shield TITAN 2

The advantage of the TITAN 2 face shield is its simple construction and excellent optics of the polycarbonate visor, without deformations of the field of view. The temperature resistance of polycarbonate of 135°C allows, unlike PETG shields, heat sterilization of the visor in an autoclave. Cheaper materials like PET-G become deformed at temperatures above 60°C. The shield is easy to install and everyone can complete the assembly within few minutes according to the instructions provided.

EU 2016/425

Size	24x26 cm
Weight	100 g
Plastic rivet	polyamide 66
Visor	polycarbonate 0,8 mm
Headband	polypropylene copolymer

- Resistance to high sterilization temperatures
- Great optical characteristics
- Impact toughness
- Light weight
- Simple construction
- Made in Czech Republic
